Professional Summary

Senior 2D game developer with 14 years of commercial software development experience. Specialized in client-side development of casual mobile and browser games using JavaScript, TypeScript, Cocos2d-JS, and Cocos Creator. Developed match-3, merge, puzzle, and solitaire games, covering the full development cycle from gameplay, UI, and mechanics prototyping to release and live updates. Experienced in Android and iOS delivery, backend development, code reviews, and mentoring.

Core Skills

Game development: 2D game development, gameplay programming, prototyping, game logic, game mechanics, UI development, mobile games, browser games, match-3, merge games, puzzle games, solitaire games.
Technologies: JavaScript, TypeScript, Cocos2d-JS, Cocos Creator, HTML5, Cordova, Android, iOS, Node.js, Express, PHP.
Tools and data: Git, CI/CD, Docker, Docker Compose, automated testing, MySQL, MongoDB, ClickHouse, RabbitMQ.

Professional Experience

Cleverapps, February 2024 — August 2026, **Senior Software Engineer**

Worked as part of the AiSensia team on 2D puzzle and solitaire games using JavaScript and Cocos2d-JS. Worked on 10 projects from the prototype stage: implemented game logic, UI, and new mechanics, fixed bugs, and continued development after launch. Brought successful prototypes to release and contributed to subsequent updates. Development was based on the company's internal game engine.

ROCKSTONE, October 2022 — January 2024, **Senior Software Engineer**

Worked on Merge Meal, a game combining merge mechanics with a restaurant renovation metagame, built with TypeScript and Cocos Creator. Migrated the backend from Django to Express. The project supported native application builds for Android and iOS.

Fulldive, August 2021 — July 2022, **Backend Developer**

Developed REST APIs for a mobile browser that rewards users for browsing. Worked in a backend team using a TypeScript-based microservice architecture, RabbitMQ for messaging, MongoDB for data storage, and ClickHouse for analytics.

TAPCLAP, November 2015 — July 2021, **Senior Software Engineer**

Worked on Candy Valley and Raspberry Jam, two match-3 games from a portfolio with a total audience of more than 50 million players. Developed and maintained the projects' codebases using JavaScript, HTML5, and Cocos2d-JS, with most game logic running on the client. The games used Cordova for mobile deployment, PHP on the backend, MySQL for data storage, and ClickHouse for analytics.

RBT.ru, July 2012 — November 2015

Senior Web Developer: May 2013 — November 2015.
Web Developer: July 2012 — April 2013.

Developed an electronics and home appliance online store integrated with an inventory management system for real-time stock information and order reservations. Optimized the website to handle traffic peaks during promotional campaigns.

South Ural State University, October 2006 — July 2012, **System Administrator**

Education

South Ural State University, 2006–2012

Engineer's degree, Control and Computer Science in Engineering Systems

Department of Automation and Control

Thesis: Enterprise Local Area Network Design
